

The SKATER Scope snorkel lens system brings the market into a new dimension of creating images. Mainly PL mounted film lenses can be used, but smaller compact photo lenses (e.g. from Nikon) are also supported by our interchangeable lens mounts.

A large variety of existing lenses will fit, but this does not mean all, as there are some which show limitations.

The compability of a lens to the SKATER Scope depends mainly on the optical design of the lens (basic criterion is the positioning of the exit-pupil). Generally, an exit-pupil position between 60 and 80mm to the film plane is best to use. We have no influence on the engineering of existing lenses, but during the development of the SKATER Scope, our goal was to make sure that it worked with as many different types of lenses as possible.

Enclosed you will find a short list of lenses that have been tested. If your lens does not appear, please let us know so we can update our list.
